Interest Notification Form

Schoolyard Program 2020

<http://gce-schoolyard.uga.edu/schoolyard/overview.htm>

The **Georgia Coastal Ecosystems Long Term Ecological Research** Program (GCE-LTER) is an NSF-sponsored project that studies how long-term changes caused by climate change, sea level rise, and human alterations of the landscape affect coastal ecosystems. The **GCE-LTER Schoolyard Program** provides critical in-service training for K-12 educators in field ecology, immersing science and math teachers in hands-on research activities in the field to enable them to bring lessons and real research data back to the classroom. Since 2009 the Schoolyard Program has been run collaboratively with the UGA Marine Extension Service in Savannah.

The participants for the 2019 program have already been selected. If you would like to be notified of future Schoolyard Program dates, send an email with the following information to gceschyd@uga.edu
